Denzel Jefferson

Charleston SC | 843-377-6273 | denzeljefferson12@gmail.com

Objective

Cybersecurity major at Charleston Southern University with hands-on experience in programming, web development, and network fundamentals. Experienced in using Elasticsearch, Kibana, MISP, Docker, and Ubuntu to support cybersecurity research and threat prioritization.

Education

- Bachelor of Science. Cybersecurity at Charleston Southern University - Charleston, SC,
    - Expected Graduation: May 2027
- Associate in Applied Science, Cybersecurity
    - Trident Technical College - Charleston, SC
- Relevant Coursework: Procedural Programming, Survey of Scripting Languages, Applied Networking, Principles of Cybersecurity, Object-Oriented Programming

Technical Skills

- Programming Languages: HTML, CSS, Java, C++, PHP, JavaScript, Python, Bash, PowerShell, Racket, Perl
- Tools: Apache, VS Code, Mu Code, GitHub, Node.js
- Networking & Cybersecurity: TCP/IP, Network Fundamentals, Cyber Threat Intelligence (CTI), Security Research, Threat Intelligence Prioritization
- Software: Microsoft Office Suite
- Operating Systems: Ubuntu Linux, Windows

Work Experience

ACE-CYBER / Naval Information Warfare Center (NIWC) — Charleston, SC
Cybersecurity Research Intern | Spring 2026

- Conducted cybersecurity research focused on improving threat intelligence prioritization for Cyber Threat Intelligence (CTI) analysts.
- Developed and tested a simulated CTI environment using Elasticsearch, Kibana, MISP, Docker, and Ubuntu Linux.
- Analyzed operational environment data collected through Elasticsearch to support automated prioritization of cyber threats.
- Evaluated and categorized simulated threat intelligence using High, Medium, and Low priority classifications.
- Conducted repeated test runs comparing automated threat prioritization with manual review.
- Documented research procedures, findings, and results for presentation to faculty, mentors, and cybersecurity professionals.
- Worked with faculty advisors and DoD/NIWC mentors to troubleshoot technical issues and improve the reliability of the research environment.
